HUNTER

SOFTWARE ENGINEER

EXPERIENCE

UNIVERSITY OF UTAH — HONORS COLLEGE

Administrative Officer | Salt Lake City, UT

2025- Present

- Designed and developed a full-stack inventory management system adopted by the University of Utah Honors College and ICO to manage shared inventory across users and locations
- Developed an Excel-based information management system for the Dean, transforming extensive student project data into a structured, navigable resource by surfacing relevant information and organizing secondary details into collapsible sections for efficient review.
- Identify operational needs and develop systems to improve how information, requests, resources, and administrative processes are tracked and managed.
- Manage Honors College purchasing, order tracking, and internal requests, maintaining accurate records and coordinating requests through completion.
- Support day-to-day college administration across scheduling, documentation, communications, event logistics, resource management, and faculty/staff/student needs.
- Coordinate projects and workflows across faculty, staff, students, and leadership while managing competing priorities and deadlines.

ICO

Assistant Manager | Utah

2021-2025

- Managed financial operations, including payment processing, account reconciliation, financial records, and day-to-day monetary responsibilities.
- Managed resident escalations and complex concerns while planning and coordinating resident events and property operations.
- Trained leasing agents in sales and closing techniques, including presenting properties, addressing prospective resident needs, overcoming objections, and guiding prospects through the leasing process.

PROJECTS

INVENTORY MANAGEMENT SYSTEM

JavaScript • SQL • Full-Stack Development

- Developed a multi-user inventory platform adopted by the University of Utah Honors College and ICO. Supports shared inventory, organization-based accounts, role-based access, audit history, and user-specific change recovery.

WISHFUL THINKING — PSYCHOLOGICAL HORROR GAME

GDScript • Godot • JSON • Game Development

Developed a narrative horror game where players investigate wish cases, interpret rules, uncover loopholes, and determine resolutions. Features branching dialogue, interconnected cases, persistent consequences, and multiple outcomes.
